

Daniel Cluff

Software Engineer

Lehi, UT | 801-855-6499 | danielkcluff@gmail.com | [LinkedIn](#) | [GitHub](#) | danielcluff.com

Summary

Full-stack Software Engineer with mid level experience delivering end-to-end features from database schema design to responsive UI. Led migration of a shared validation library, cutting package size by 15% and built a reusable data-table framework used across 20+ views, accelerating development speed. Also spearheaded frontend development of a customer-facing CMS. Seeking to apply full-stack expertise to drive scalable, user-focused solutions.

Experience

WriteGrader.com

May 2025 - Aug 2026

Software Developer

Remote

- Owned the migration of a shared validation library from Zod to Valibot, reducing package size by 15% and decreasing downstream application bundle sizes by 2.5–4% across three consuming applications.
- Designed and implemented a reusable data table framework used across ~20 views, supporting configurable columns, client-side search and sorting, persistent user preferences, responsive mobile layouts, and custom component rendering.
- Lead the frontend development of the main customer-facing content management system, working with backend engineers on API design, building full workflows with Svelte, and converting Figma mockups into responsive desktop and mobile interfaces.

StartBooking.com

Jan 2021 - Sep 2023

JavaScript Developer

Remote

- Developed and packaged a reusable library of layout and form components using React and Redux, version-controlled in GitHub and aligned with Figma designs, which reduced UI development time for the team
- Led the rollout of QA integrations for frontend end-to-end testing with Cypress, adding tests to the CI pipeline, which improved test coverage and shortened release cycles
- Migrated calendar packages to Full Calendar. Built integrations for RESTful APIs and developed new features, resulting in increased stability and maintainability.

PROJECTS

Kubernetes Homelab [Github](#)

Jan 2026 - Present

- Architected and operated a three-node Kubernetes platform on Talos Linux with Cilium network isolation, Traefik ingress, Longhorn storage, MetalLB load balancing, automated TLS, monitoring, and secure remote access.
- Engineered a self-hosted CI/CD pipeline using GitHub Actions, an Apple Silicon/Colima runner, vulnerability scanning, a private OCI registry, immutable image digests, and GitHub App-based deployment promotion.

Ponder - Prayer Companion [AppStore](#)

Jan 2025

- Designer and engineer for prayer list app. (React Native, JavaScript, CSS, iOS, Figma)

Skills

- JavaScript, TypeScript, Go, Zig, Svelte, React, React Native, Node, SQL, AWS/Cloud, RESTful API, CI/CD, Git/GitHub, Docker/Kubernetes, Testing, Product Design, Figma, Presenting, DevOps, AI

Education

FreeCodeCamp.org

Jul 2020 - Dec 2020

JavaScript Data Structures & Algorithms Certificate

Certifications

- Amazon Web Services: Solutions Architect Associate Certificate

Dec 2023
